

What's New

Key Enhancements

Clarip has introduced a number of key enhancements to improve the overall operational efficiency, stability, security and performance of the privacy governance platform.

General

- Unified Login - All portals can now be accessed as a group or continue to be accessed individually.
- Mobile App Scanner - Mobile App Scanner is now live offering deep insights into your mobile apps for Android and iOS.
- User Management - Added ability for client administrators to add and manage users.
- ADA - Standardized accessibility options for disabled users interacting with Do Not Sell and Cookie Banner assets.
- Health Checks - Enhanced automation for monitoring and validation of live resources.
- Data Flow Analyzer - Upgraded and optimized code to enhance performance.
- Single-Sign-On - Expanded options for granularity of permissions and enhanced support.
- Alerting - Optimized to help you stay compliant. If a script moves, you will know!
- Email Integration - Expanded options and support for connecting client systems for Privacy Center notifications.
- Reports - Ability to pull reports across all domains and optimized for performance.

Cookie Compliance

- Added option to include logic for real time updating of cookies on the cookie preference pop-up to allow for faster and more accurate performance.
- Upgraded to have the ability recognize and action on GPC signals directly from Cookie Banner.
- Refined categorization settings to allow for easier management.
- Optimize all tables and charts to enhance loading speeds.
- Added ability to sort and export captured consent data.
- The preview section now includes additional instructions, making it more intuitive and user-friendly.

Do Not Sell or Share

- Overhaul of DNSS blocking technology to revolutionize the capabilities and make it the best privacy software available.
- Enhanced the form to account for additional requirements related to anonymized submissions.
- Adjusted the state selector in the DNSS pop-up default to "Select".

Privacy Center

- New option to assign incoming requests to an individual user within a department.
- User List search functionality added.
- More options for users to personalize their experience.

Consent Management

- Implemented Audit Trail API.
- Options to personalize the form by uploading custom icons.

Orchestration Rules

- Implemented additional options for Vendor Communication Rules to allow for more precise control of notifications to vendors.
- Add additional info to scan orchestration logs to speed up root cause identification in the event of a failure.
- Expanded support for different types of vendor integrations.

Website Scanning

- Added rules to ensure that any cookies that default to "Other" in categorization trigger an email alert notification.
- Added additional options for sorting and organizing user flows.

Privacy Intelligence Dashboard

- Enhanced Data Mapping charts for more granular detail.
- Privacy Intelligence Dashboard - Added additional charts for Visitor Tracking Prevention feature.
